Von Baranow Informatica Ltda.

V$Pague

Version #: 3.1.0 **App Type:** Payment Middleware **Target Market:** Retail **Reference #:** 13-02.00291.002 **Tested Platforms/Operating Systems:** Debian, Microsoft Windows 8 **Service Pack/Build/Version:** Debian Linux 6, Microsoft Windows 8	Validated According to PA-DSS (PA-DSS v2.0)	Acceptable only for Pre-Existing Deployments	7 Nov 2014	28 Oct 2016	Trustwave Holdings, Inc.

Description Provided by Vendor: The V$Pague application allows a merchant to process many different types of payment transactions, such as credit card based (credit, debit, pre-auth), bills, payment check validation and warranty through all networks and brands that provides these services (Amex, Banrisul, Redecard, Cielo, Serasa, etc). The application keeps up to date with the market evolution and allows running in many different platforms. V$Pague is constantly updated, aggregating new services as the market demands.

V&SPague

Version #: 2.0.0 **App Type:** POS Face-to-Face/POI **Target Market:** Brick and Mortar Merchant **Reference #:** 10-08.00291.001 **Tested Platforms/Operating Systems:** Java - Any java-supporting OS	Validated According to PA-DSS (PA-DSS v1.2)	Acceptable only for Pre-Existing Deployments	28 Oct 2013	28 Oct 2013	Trustwave Holdings, Inc.

Description Provided by Vendor: The application accepts PAN and CVV2 data by manual entry into the application. It also accepts track and PIN data entered into a PIN Entry Device. The application client sends the data to the application server, which sends it to the card brand. No cardholder data is stored, before, during, or after authorization. It does not perform settlement or chargeback. The application includes client, server, and console (reporting) modules, all of which are installed at the merchants location. V&SPague is a Java-based application and has no web-based components. Only software is provided by the vendor. The merchant must provide, at minimum, a single PC Server to install the client, server, and database onto. The application comes with the Oracle 10g Express Edition database. It stores transaction data for reports, but no cardholder data.
